Coloplast

Assura

Complications with the digestive or urinary systems after an operation can make the use of a colostomy bag a necessity. It is of crucial importance that a colostomy bag should be easy to use and that its user feels confident using the bag in public if a normal lifestyle is ever to be regained.

The Assura colostomy bag was developed in close collaboration with nurses and patients. Special emphasis was placed on creating an intelligible, user-friendly means of operation that could be used by both the elderly and vision-impaired. With the press of a finger on a spring lock, the bag's connection ring is hermetically sealed.

Client: COLOPLAST
Product: Assura
