**Product:** FlowerWave

**FlowerWave**

FlowerWave is a modern vase, designed by Knud Holscher Design for d-zn.

The shape of the vase has its origin in a nonfigurative oriental tile pattern.

The single module has a characteristic and expressive shape. When composed in a larger number, many different shapes and patterns can be created. Thereby, the vase adapts to the table, the number of flowers, and the mood of the user.

FlowerWave is manufactured of High-Gravity Compound, an environmental friendly material of high quality. It is available in four different colours, which can be combined according to desire.
