## LightArch

LightArch is a candleholder, which offers almost unlimited possibilities for creating your own personal candleholder. To be in a stable position, the candleholder has to consist of a minimum of three arches. Beyond this, an unlimited number of arches may be added in a large variation of ways. Almost any combination is possible.

The sticks curve to mirror and reflect the glow of the candles. Both, material and its shape, thereby put the glow of the candle light in focus.

LightArch can be easily packed and stowed away, while not in use.

The pipe of the candlesticks can carry candles of varying widths without the use of foil or the like. With its supple combination of practical and aesthetic advantages, LightArch is unique example for a modern candleholder.

LightArch is available in two sizes: *classic* for candles with a diameter between 20 and 24mm; *mini* for candles with a diameter between 10 and 14mm;

Material: Polished stainless steel
