**Product:** Jilly

**Awards:**

### Jilly spotlights

The Jilly spotlight series unites compact forms with high quality lighting technology and is therefore ideal for providing accent lighting in galleries, shops or the home. Every Jilly spotlight has a matt black, incorporated antidazzle ring (snoot) with a cross baffle at the front lens. It represents a visible expression of the careful measures taken to limit glare and guarantees a high degree of visual comfort. The housing and bracket are made of cast aluminium; the electrical conduit cannot be seen as it is installed internally.

### Jilly floodlights

Jilly floodlights are versatile lighting tools that can be used to illuminate vertical surfaces evenly and accentuate objects. The cut-off angle of 50° and matt black anti-dazzle frame guarantee an unusually high level of visual comfort.

### Jilly pendant luminaires

In photometric terms, Jilly pendant luminaires are closely related to Jilly spotlights. With their directed halogen light, they are suitable for accentuating horizontal surfaces and are therefore ideally suited for use in restaurants, shops or prestigious
