Pure

Spot, Downlight, Wall, Suspension.

Pure is a collection of accent spotlights for interior installation on three phase track and ceiling.

The collection is suitable for installation in e.g. museums and shops, where a homogenous and calm light source is required.

Pure is available as spotlight, suspension light, ceiling- and wall light and recessed downlight in different variations and sizes.

The new spotlight is characterized by a patented mechanism, hiding the adaptor

necessary for track installation in the body that also carries the power unit. Both rotation and swivel can be locked with one locking mechanism. This guarantees that the spotlight stays locked in position even when changing lamps.

The body, cover and adjustable lamp support are manufactured of die-cast aluminium alloy, powder-coated white, grey or black.

A full range of accessories are available to increase the possibilities of Pure, including screening elements, colour filters and elliptical distribution lenses.
