Laptop table

The Laptop table is the result of an inhouse design competition of the interior design store PAUSTIAN in Copenhagen.

The frame of the table is constructed of lightweight but strong aluminium profiles; The tabletop is made from an aluminium honeycomb plate, which is veneered.

The table is extendable with a hidden extra leaf, which is placed in a tray underneath while not in use. This tray also offers storage space for a laptop, wires, transformers, etc.. The wires can be led invisibly inside a track in the legs of the table.
