

## Research

A section through the frame of the Reframe window with the section through a typical triple glazed window superimposed upon it in grey

Client:  
EU

The thermal performance of the Reframe Window compared with typical double and triple glazed windows

### REFRAME

An entirely new concept for opening windows with an extremely low U-value ( $<0.6 \text{ kWh/m}^2\text{K}$  in standard test measures), which is demonstrated in full scale in laboratories and are patent pending.

Now a dialogue with producers is initiated about further development, production and launch of the product, which will set a new standard for window designs and performances.

Developed in corporation with a international consortium.
