

Sorø Ole Bjerregaard

H-line Container

The H-line containers are made of mdf with a lacquered surface, the shelves and partitions are produced in anodised aluminium. The corpus of H-line is detailed to achieve a new concept with thin and elegant lines. The containers are produced in three versions: They can receive doors, drawers or an aluminium cross for open shelving. Drawers are supplied with tilted aluminium shelves for paper storage.

The containers might be hung on a wall, mounted on wheels or stacked on the floor.
