H-line

Height-adjustable conference-, dining- and worktable.

The H-line table is produced with a special, 30mm tabletop with surfaces in veneer, plastic laminate or with a lacquer finish. The tabletop is supported by aluminium legs which are height-adjustable and have built-in recesses for cabling. The legs are mounted to the tabletop with a 10mm aluminium plate, which is recessed in the bottom side of the tabletop. The massive edge list has a milled groove to achieve an elegant expression.

The table is available in the following sizes: 80/80cm (canteen table), 80/160cm (working table), 160/160cm (dining table), 90/180cm (big working/conference table).

H-line is provided 'knock-down' with supplying torx screws, torx-tool and is easy and fast to assemble.

The new demands for both a sitting and standing working position are solved by a separate worktop, where the laptop / keyboard with flatscreen is installed; a both economic and functional solution.
