Omni Kitchen

Omni Kitchen
Height adjustable kitchen

The Omni kitchen differs uniquely from other kitchens on the market.

One remarkable difference is that the OMNI kitchen is based on a height adjustable system, making it possible to adjust the height on the tabletop in few seconds. The entire bottom part (base) with drawers, cupboards, oven, hot-plate, sink and tabletop etc. is thus adjusted for each individual need.

With this you make sure that the entire family always gets the best working position and even the children will be able to participate in the cooking.

Even for people with special care needs – like elderly and disabled the OMNI kitchen can lead to help in the daily life.
