

Toni

Sanitary system

This stylistically consistent and functional range of taps meets the demand for taps to match high-tech inspired interior design.

The almost sculptural design has featured countless times in interior design magazines and trade journals, where it has established itself as a modern classic.

toni t-line is the first single-handle tap to be designed around a cartridge with ceramic discs that can be operated without lifting the cap.

The tap is scald-proof thanks to a hot-water restriction option, while an adjustment screw permits the water volume to be set to individual requirements.
